📍 Samut Sakhon, Thailand

Summary

Data engineer building production data platforms. 3+ years across data & operations, currently shipping a **50 GB warehouse processing 100K+ records/day** via ELT pipelines, **193+ dbt models with 180+ data tests**, dimensional data modeling, and reverse-ETL to legacy systems — for a 100M+ THB/month e-commerce business. Stack: **dbt, Airflow, Azure (ADF, App Service), Python, SQL Server, FastAPI/React**. Builds for non-technical business users (warehouse, procurement, exec).

Experience

EP Asia Group May 2025 – Present

Data Engineer • E-Commerce Data Platform

- **Built the company's first data warehouse** — replaced messy Google Sheets/Excel for 25+ staff, saving **25–75 person-hours/day across the team** (1–3 hr/person) and eliminating cross-spreadsheet reconciliation errors.
- **Designed the data warehouse structure** — 193 transformation steps across 9 business areas, processing **100K+ records/day** from Shopee, Lazada, TikTok, Facebook. Powers **BI dashboards** for exec, procurement, warehouse, and fulfillment teams.
- **Built ETL pipelines** pulling marketplace file exports and internal data (Power Automate portal automation, Python, 46 Azure Data Factory pipelines — incl. 25 reverse-ETL to legacy systems). Plus a self-service config app so non-developers can add new data sources themselves.
- **Replaced the legacy warehouse system** with custom apps (WMS, barcode scanner, invoice OCR) — warehouse staff (including non-Thai speakers) now learn in under 5 minutes; **1,200+ orders/day** with full audit trail.
- **Worked with procurement, warehouse & executive teams** to find work that could be automated — replaced manual processes with **low-code / no-code tools and AI**.

Traveler Co., Ltd. 2022 – 2025

Accountant / ERP & BI Analyst

- Set up **Ecount ERP master data from scratch** — defined chart of accounts, customer/vendor master, and SKU mapping standards, giving the company a clean foundation for finance, sales reporting, and downstream BI.
- Built **Power BI reports** and used **Power Query** to reconcile ERP data across sales and finance — established consistent monthly reporting that closed recurring discrepancies between the sales and finance teams.
- Established product/SKU master data across marketplaces and ERP as a single source of truth for the catalog — eliminated the SKU-mapping ambiguity that had caused stock misalignment across channels.

Technical Skills

Data Warehouse

SQL Server T-SQL dbt Medallion architecture Kimball / star schema SCD type 2

Data Engineering

Python Pandas ETL / ELT pipelines Apache Airflow SQLAlchemy Pipeline orchestration

Data quality & alerting

App Development

FastAPI React / TypeScript HTMX Alpine.js Jinja2 Alembic (DB migrations) REST / JSON API integration

BI & Automation

BI dashboards & reports Power BI Power Query Power Automate Low-code / No-code Excel (advanced)

Cloud Services

Azure Data Factory Azure App Service Blob Storage Document Intelligence

Developer Tooling

Git GitHub Actions Docker AI pair-programming Claude Code Cursor

Power BI & Excel for Data Analysis

9Expert Online Training

Hands-on coursework on Power BI modeling, DAX, and Power Query — applied to monthly finance & sales reconciliation at Traveler Co.

Python Programming Foundations

Skoooldio · Jun 2025

Instructor: Soranapop Devapaticom (สรณภพ เดวปัติคม). Core Python for data work — used as the base for ETL scripts, FastAPI services, and Airflow operators in production.

Continuous Self-Directed Learning

Ongoing

Data engineering stack via official docs, YouTube, and AI pair-programming — dbt (medallion, incremental, tests), Apache Airflow, Azure (ADF · App Service · Document Intelligence), FastAPI, React/TypeScript.

01 E-Commerce Data Pipeline & Analytics Platform

Full data platform — 50 GB warehouse with 44M+ rows, serving 9 business domains, 1,200+ orders/day, and 100K+ rows/day across 4 marketplaces.

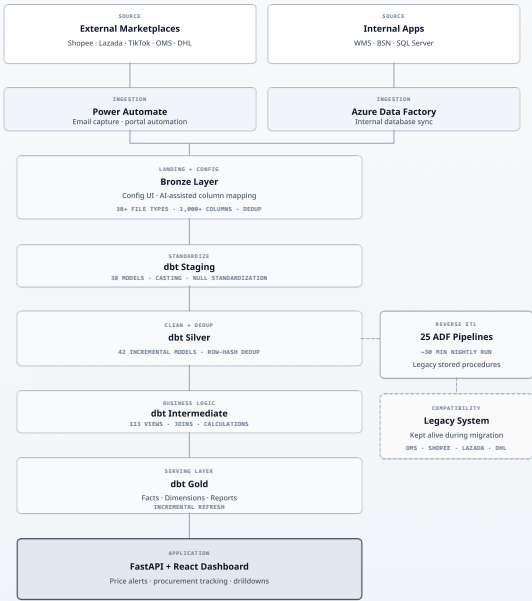

- Ingests data from 8 sources (Shopee, Lazada, TikTok, Facebook, OMS, DHL, Flash Express, internal WMS/BSN) → 4-layer medallion architecture with dbt — replaces a daily manual download routine that one person used to do every morning.
- **Bronze config web app** (FastAPI + React) — self-service UI for file types, validation rules, and AI-assisted column analysis/mapping suggestions, so non-developers can onboard new sources safely.
- Serves **FastAPI + React dashboards** with real-time KPIs, price alerts, procurement tracking, and operational drilldowns — driving daily restock decisions for procurement.
- Runs automatically outside business hours via **custom Airflow operators** (Bronze, dbt), with **180+ dbt data tests**, source freshness checks, and Thai-language **email + LINE notifications** on failure or stale data.

100K+	1, 200+	193+	9	THB 800M+
rows / day	orders / day	dbt models	business domains	revenue processed (to date)

Data Platform Flow

Marketplace files and internal app databases move through controlled ingestion, dbt warehouse layers, operational dashboards, and a reverse-ETL bridge for legacy reporting.

☐ Source / Ingestion ☐ Warehouse Layer ☐ Application ☐ Legacy Bridge
